

# ARCHITECTURE

Architecture is an art, a science and a business, that starts with a basic understanding of human nature and of the relationship of people to their environment. Architecture programs are designed to teach people to apply design skills to improve the physical surroundings and to translate drawing and specifications into reality.

# Typical Coursework in the study of Architecture

Programs in architecture stress problem solving skills and awareness of environmental issues as they relate to the development of designs. Architects are required to have knowledge of site design, building design, interior design, detail design, specifications, contracts, construction techniques, building materials and an understanding of the building trades, practices and techniques, economics, law, professional ethics, and the humanities.

The study of architecture typically focuses upon architecture as a humanistic discipline. Programs provide preparation in the areas of architectural history, theory and design.
