

# PSYCHOLOGY

A degree in Psychology provides students with skills and abilities that may serve as building blocks toward many occupations. Psychology is designed to prepare students for careers in psychology or to provide a background for further study in education, business, law, law enforcement, medicine, and other social sciences. Perhaps more than any other major, psychology also offers tremendous opportunities to learn about oneself and one's skills.

# Typical Coursework associated with the study of Psychology

Psychology is devoted to the understanding, prediction, and control of human behavior. It seeks to understand and explain both normal and abnormal behavior, mental ability, perception, development, and individual differences. Because it considers the mental, attitudinal, motivational, and behavioral characteristics of individuals, psychology has many subdivisions and areas of specialization and is a more complex field than many realize. Programs in Psychology are designed to prepare students for careers in psychology or to provide a background for further study in education, business, law, law enforcement, medicine, and other social sciences.
